MEMON. THE ORGANIC WAY TO SOIL FERTILITY

The need for healthy soils for sustainable production is greater than ever. MeMon is a focused and dedicated leader when it comes to improving soils and making them fertile. By developing, producing and distributing affordable, high quality fertilizers and soil improvers of natural origin for conventional and organic cultivation. But also by initiating inspiring relations with our partners.

Worldwide growing network

Since the early nineties, MeMon has grown into a global market leader in organic, organo-mineral and biological fertilizers and soil improvers. With a distribution network in more than 70 countries in Europe, North Africa, Middle East, Asia and Latin America. And we keep on growing.

Leading in multiple markets

MeMon is a leader in markets that are developing strongly:

- Agriculture & Horticulture
- Hobby gardening
- Sport, Golf & Public green

We offer each of these markets a distinctive product range and a specific market approach.

Dutch reliability and flexibility

With its base in the Netherlands, MeMon can guarantee sustainable availability of high quality, affordable materials and excellent logistics.

MeMon has three production sites at home and abroad, as well as its own laboratory. This gives MeMon the flexibility to produce quickly and to order. In large volumes if necessary. And always according to (inter)national standards.

Fertile cooperation and innovation

At MeMon, we highly value the cooperation with our partners. Together we create many innovative products. Tailored to crop needs, local soil and climate conditions and to the need for higher yields and environmentally friendly production.

Ready for a fruitful partnership?

If you want to offer your customers the best value for money products and well known brands in organic fertilizers and soil conditioners, join us. Our dedicated and enthusiastic team will be happy to support you.

HEALTHY SOIL, BETTER CROPS, HIGHER YIELD

MeMon develops and produces high quality organic, organo-mineral and biological fertilizers and soil improvers. In standard and tailor-made compositions. For professional agriculture, flower, vegetable and fruit growing, viticulture and tree nurseries.

Complete in conventional and organic growing

MeMon distinguishes itself through a complete range of solid organic fertilizers for conventional cultivation, and solid and liquid fertilizers for organic cultivation (EU834/2007). With a choice of product forms, including pellets, crumb, unique all-in-one granules and granular blends.

Standard and customised products

In addition to standard products, MeMon offers tailor-made fertilizer solutions in close cooperation with local partners. These formulas meet the specific needs of local crops, soil, climate and end user. All in accordance with local regulations.

BASIC ORGANIC FERTILIZERS

ORGEVIT, ORGA/BASE/P, ORGA/BASE/K

- ▶ Used as a base fertilization for various crops
- ▶ Supply of main nutrients (NPK), trace elements and a high percentage of organic matter
- ▶ Produced with manure of Dutch origin

SOIL CONDITIONERS

TERRAVIT, TERRAVIT BIO

- ▶ Contribute to the supply of stable organic matter
- ▶ Essential for optimal soil activity and good soil structure
- ▶ TERRAVIT BIO  made from 100% vegetable origin and allowed in organic cultivation

ORGANIC NPK FERTILIZERS

SIFORGA, PRIMOVIT

- ▶ Enriched fertilizers made from organic raw materials only
- ▶ High organic matter and nutrient content for complete organic fertilization
- ▶ SIFORGA in unique granular form (1-2 mm and 2-5 mm)
- ▶ PRIMOVIT standard and crop-specific formulas available as pellets

100% organic, maximum yield

Our products, apart from organo-mineral fertilizers, consist of 100% organic material. To enhance growth and crop performance, they contain both organic matter and all essential macronutrients and trace elements.

On demand, products can be enriched with among others mycorrhiza, humic acids, bacteria, zeolite and algae.

Renowned brand names

We mainly supply our products under MeMon brand names and in MeMon packaging. Our brands such as ORGEVIT, SIFORGA, MONTERRA BIO and FONTANA BIO are internationally recognised.

► ORGANO-MINERAL FERTILIZERS

PRIMAX, PRIMAX KEMINOR

- Produced by mixing organic raw materials and mineral nutrients
- Highly concentrated and therefore excellent for precision fertilisation of crops
- Average organic matter content between 25% and 50%
- PRIMAX formulas available as pellets
- PRIMAX KEMINOR standard and crop-specific formulas as 2-5 mm granular blends

► BIOLOGICAL SOLID FERTILIZERS

SIFORGA BIO, MONTERRA BIO

- Control Union Certifications certified in compliance with EU Directive 834/2007
- Complete range with high N, P and K formulas and balanced fertilizers
- SIFORGA BIO fertilizers in unique granular form (1-3 mm, 1-5 mm, 2-5 mm)
- MONTERRA BIO fertilizers available as pellets and crumbs

► BIOLOGICAL LIQUID FERTILIZERS

FONTANA BIO

- Control Union Certifications certified in compliance with EU Directive 834/2007
- Raw materials of 100% organic origin such as fermented plant extracts and enzymatically hydrolysed animal proteins
- Specially designed for precision fertilization of organic crops
- Application by fertigation or leaf fertilisation

TECHNICAL BENEFITS

Organic nutrients

- Slow release of nitrogen
- Predictable N-release
- Less leaching of nitrogen

Organic matter

- Improves soil structure and stimulates biological soil activity
- Improves root development
- Improves CEC (Cation Exchange Capacity)
- Increases nutrient absorption and unlocks micro-nutrients
- Increases water retaining capacity of the soil (sponge effect)

PRACTICAL BENEFITS

- Safe and clean fertilizers free from pathogens and weed seeds
- High, constant and verifiable quality
- Dry matter content of 90%, thus stable during storage
- Good solubility
- Low application rate and easy spreading

CONVENTIONAL GROWING

MeMon's product range for conventional growing consists of our top-selling chicken manure pellets ORGEVIT and organic granules SIFORGA. Next to these products, we supply both standard and custom-made organic NPK and organo-mineral NPK fertilizers. For every type of soil and crop we have a solution.

ADDITIVES

Beneficial additives

MeMon has the special expertise and equipment for enriching fertilizers with quality-enhancing additives. Each additive has its own specific benefits.

Yield increasing

Additives improve soil conditions and stimulate the natural defence mechanism of the plant. This particularly applies to crops grown under environmental stress (drought, heat or other extreme conditions). In this way additives help increase the yield and improve the crop quality.

Frequently used additives

Bacteria

Rhizosphere bacteria contribute to the development of healthy soil, key for strong and vital plants. They help to improve the stress resistance of the plant.

Mycorrhiza

Mycorrhiza fungi, in symbiotic relationship with the crop, improve the nutrient and water absorption capacity of the plant and stimulate its natural defence mechanism.

Trichoderma

Trichoderma close to the roots stimulate the natural defence mechanism against soil-born diseases. They also accelerate germination, root development, plant growth and flowering.

Humic acids

Humic acids work both as soil conditioner and growth stimulant. They improve the CEC (cation exchange capacity) and plant enzymes are stimulated.

Algae

Algae help improve the fertility and water retaining capacity of the soil. Furthermore, early growth and a higher yield is obtained. They also stimulate the natural defence mechanism of the plant.

Zeolite

Zeolite increases the CEC and water absorbing capacity of the soil. It enhances water and nutrient availability during dry periods.

PRODUCTION & QUALITY

Process innovation

MeMon has two up-to-date production sites in the Netherlands and one abroad. We continually invest in production facilities and optimisation of production methods and quality control. We meet national and international standards and requirements.

Production/Product certifications

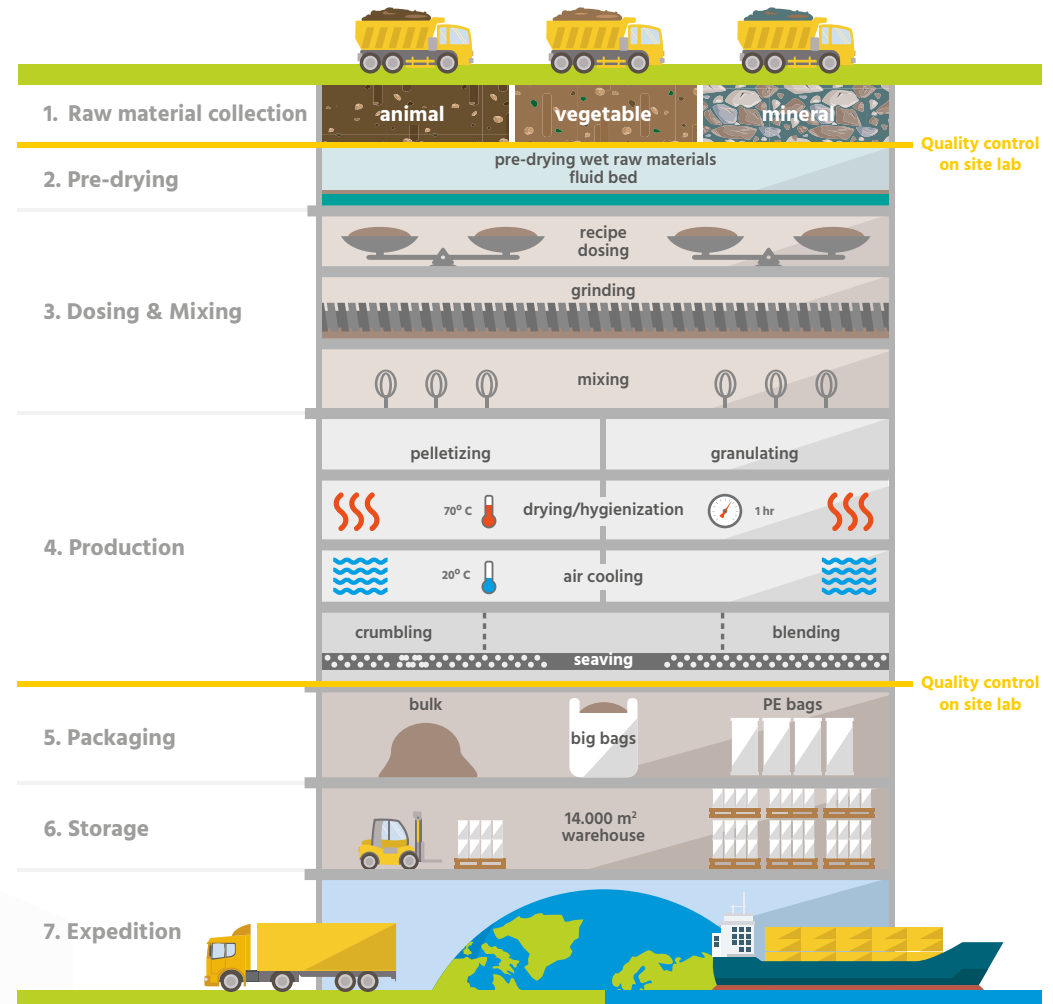

Our plants are EC/1069/2009 and EC/142/2011 certified. Our fertilizers for organic cultivation are certified and monitored by Control Union Certifications (CUC) in accordance with EC Regulation 834/2007. MeMon biological chicken manure pellets have Skal Biocontrole approval.

Product quality assurance

Our products are based on raw materials from animal and vegetable origin, selected with the utmost care. Incoming materials and finished products are continually monitored, on site and at external laboratories. Testing for nutrient contents, physical product features and bacteria.

Expertise in worldwide export

We have more than 30 years experience in the worldwide export of organic/organo-mineral fertilizers. You can rely on our internal expertise and handling customs formalities. All export certificates are available on request.
