MEMON. THE ORGANIC WAY TO SOIL FERTILITY

The need for healthy soils for sustainable production is greater than ever. MeMon is a focused and dedicated leader when it comes to improving soils and making them fertile. By developing, producing and distributing affordable, high quality fertilizers and soil improvers of natural origin for conventional and organic cultivation. But also by initiating inspiring relations with our partners.

Worldwide growing network

Since the early nineties, MeMon has grown into a global market leader in organic, organo-mineral and biological fertilizers and soil improvers. With a distribution network in more than 70 countries in Europe, North Africa, Middle East, Asia and Latin America. And we keep on growing.

Leading in multiple markets

MeMon is a leader in markets that are developing strongly:

- Agriculture & Horticulture
- Hobby gardening
- Sport, golf & public green

We offer each of these markets a distinctive product range and a specific market approach.

Dutch reliability and flexibility

With its base in the Netherlands, MeMon can guarantee sustainable availability of high quality, affordable materials and excellent logistics.

MeMon has three production sites at home and abroad, as well as its own laboratory. This gives MeMon the flexibility to produce quickly and to order. In large volumes if necessary. And always according to (inter)national standards.

Fertile cooperation and innovation

At MeMon, we highly value the cooperation with our partners. Together we create many innovative products. Tailored to crop needs, local soil and climate conditions and to the need for higher yields and environmentally friendly production.

Ready for a fruitful partnership?

If you want to offer your customers the best value for money products and well known brands in organic fertilizers and soil conditioners, join us. Our dedicated and enthusiastic team will be happy to support you.

MATCH. ORGANIC AND ORGANO-MINERAL FERTILIZERS

Sports turf require healthy soils with green, dense and wear-resistant lawns. With this in mind, MeMon has developed organic and organo-mineral fertilizers for professional maintenance of sports fields, golf courses and public green. Focusing on the soil and environment, we produce affordable fertilizers that are efficient and convenient to apply. Delivered in a wide range under the well known brand name MATCH.

Strong features, optimal result

MATCH SPORT and MATCH GOLF organic-based fertilizers ensure natural release and effective use of nutrients (lower leaching rate). The supply of organic matter stimulates biological soil activity and improves soil structure. This ensures an excellent air and water balance, promoting root development and increasing resistance to drought and diseases.

Healthy soils, hard wearing lawns

Apart from the main nutrients, all MATCH fertilizers contain magnesium and trace elements for a deep green colour and healthy, strong, disease-resistant turf. In some of the golf fertilizers, the benefits of organic, slow-release nitrogen are combined with quick and slow release mineral nitrogen. The best of both worlds!

Solution for all seasons

For sports fields and fairways, the MATCH range offers various formulas for preseed, spring, summer, autumn and all-season fertilization. Supplied in a unique 2-5 mm all-in-one granule or granular blend. For use on golf greens and other close mown grasses, we offer 1-2 mm or 1-3 mm all-in-one granules. For every soil and every season, there's a MATCH.

KEY BENEFITS

Slow release by combining organic and mineral nitrogen forms

- Even growth
- Less nitrogen leaching

Supply of organic matter

- Activating soil life
- Breaking down old organic material (thatch)
- Improving root development
- Increasing CEC
- Improving soil permeability

Sanitary safe, dust-free and easy to apply granules

MATCH SPORT

FOR HEALTHY
SOILS WITH
DENSE, GREEN,
HARD-WEARING
LAWNS

- Top-quality fertilizers for professional maintenance of sports pitches.
- Highly-concentrated organo-mineral and organic fertilizers
- Match Sport 2-5 mm granules for use on football pitches, fairways, tees and surrounds higher than 10 mm.
- Combined supply of nutrients and organic matter.
- With slow (Organic) and quick release nitrogen.
- Humus for increased soil activity and improved soil structure.
- Unique, easy to apply, clean and safe to use granules.
